Luma Surveillance™ 100-Series Analog Camera

With 100-Series analog cameras from Luma Surveillance™, you can access high-resolution video from any outdoor scene. Their 960H with 720TVL allows you to get the widest screen capability and best resolution possible on an analog camera. If that's not enough, 100-series cameras are available in black or white, so they seamlessly fit into any environment.

HIGH-RES PICTURE

Stop squinting to see fuzzy video. 960H with 720TVL allows you to get the widest screen capability and best resolution possible on an analog camera.

NO RAINCOAT NEEDED

If you're installing an outdoor camera, it needs to actually stand up to the outdoors. 100-Series cameras have an IP-66 outdoor rating, which means no rain, no wind, and no winter cold can stop them.

(INFRA)RED ALERT

Don't be afraid of the dark. Luma 100-Series cameras provide up to 30 feet of infrared (IR) signal, helping combat over-exposure in dim settings and evenly illuminating the subject for a better visual.
