

Installation Information

Thank you for selecting Bose® PowerMatch® amplifiers. This document is intended to provide professional installers with basic installation and safety guidelines for using the AmpLink Digital Input Card accessory with PowerMatch® amplifiers. Please read this document before attempting installation.

The INPUT RJ-45 connector receives up to 24 digital channels from a Bose AmpLink product. The amp also supports a THRU path for daisy-chaining all 24 digital audio channels to other Bose AmpLink products, at a maximum distance of 10 m between products.

 **CAUTION:** Shielded EIA/TIA 568B straight CAT 5 cable, or equivalent, is required for proper AmpLink operation. Unshielded cable is not supported and may cause AmpLink audio to operate improperly. Do NOT connect either of RJ-45 ports to an Ethernet-based network.

To install the AmpLink Digital Input Card:

1. Turn off and unplug the amplifier.
2. Detach the rear expansion slot cover plate by removing the two screws. See Fig. 1.
3. Align the AmpLink card with the plastic card guides in the open slot; insert until the rear panel is flush with the rear of the amplifier. See Fig 2.
4. Screw the card into place.
5. Set the channel select switch appropriately.
6. Plug in the power cord and turn on the amplifier.
7. Using the front panel, navigate to the FIRMWARE VERSION screen (MAIN MENU>UTILITY>FIRMWARE VERSION).
8. Check the amplifier LCD screen to view whether the AmpLink card has been identified. See Fig 3.

Fig. 3. Amplifier LCD screen after AmpLink card is installed

9. If the card does not appear in the FIRMWARE VERSION screen, repeat steps 1 through 7. Be sure that the card is completely pushed into the slot and that the card is properly aligned with the card guides.
