

HEALTH CLUB - APPLICATION GUIDE

The Health Club application is very similar to many other applications in that it has multiple zones, the need for crossovers for sub woofers and also paging.

The Paging is straight forward ducking into the entire facility.

The aerobics headset mic is also using ducking. In this case it is using priority ducking to turn down whatever source is playing so that the instructors speech may be heard along with the music.

Crossovers for the aerobics room along with wall controls make this an easy installation with little training needed for the end user.
