

MONO FRONT OF HOUSE WITH SUBS AND 2 MONITOR MIXES - APPLICATION GUIDE

In this application you see a few uses that are not always thought of as typical for an installation device. The ZonePRO handles these easily as well.

Sitting between the console and the amplifiers, the ZonePRO is taking care of the main EQ, AFS, compression, crossover, tuning EQ, main and sub level matching, limiters and time alignment delay.

Again, between the console and amplifiers, the ZonePRO is handling the EQ, AFS, gate, bandpass filters, tuning EQ and limiters for the monitors.

In this way, the ZonePRO may also be used for club, house of worship, theater, school and other applications as well.
