

EL-SW-NVR

Onboard/Extender Network Video Recorder

Comprehensive Surveillance for Installations of Any Size

The software-based ELAN® Onboard Network Video Recorder can support 4 channels, and up to 8 channels per Extender Controller. This full-featured system delivers an award-winning experience, convenience and power at an affordable price.

Setup is simple, requiring minimal hardware.

Using ELAN Management Cloud, install the license on an **SC-100 or SC-300 System Controller**, add external storage and the cameras are ready to roll. To take full advantage of the NVR system we recommend pairing it with ELAN cameras, but it will operate with any ONVIF-compliant camera.

Control of the system is done completely within the award-winning ELAN user interface, giving you the ability to manage both the NVR and the cameras without the need to switch between the ELAN control app to view live feeds and a surveillance app to review recorded footage.

With the ELAN NVR Surveillance System, camera recording and playback are controlled directly within the UI. Switch between standard or the new full screen view for live stream and recorded playback. Playback is viewable in a linear timeline with quick navigation tick marks in event-based mode where you can easily switch from one event to the next. When pairing the NVR system with ELAN cameras powered by IntelliVision® video analytics, events can be filtered by survey area (motion), people and vehicle classification, and custom events.

For small-scale (4 or fewer channels) or large-scale installations (up to 36 channels), there is no need compromise on features. The ELAN Software NVR gives you the flexibility to grow your business.

EL-SW-NVR

Network Video Recorder

The ELAN® NVR has intuitive view, search, and analysis tools – which pairs well with ELAN IP Cameras with built-in IntelliVision® AI analytics

ORDER #: EL-SW-NVR

FEATURES

- Simple installation, setup and operation
