About Araknis

BECAUSE NETWORKING SHOULD ALWAYS BE THIS EASY.

Araknis Networks® understands the importance of

modern, seamless connectivity. Picture a network

where complex equipment is connected through the

cloud, and where each piece of equipment delivers

top speed and incredible performance, whenever you

need it. Why would you want anything less?

Don't settle for buffering. Switch to Araknis.

FEATURES

•ROUTERS•
4-Gigabit LAN sparks your network connection, and links the router to multiple switches in the network or can connect other devices directly to the router. Layers of security in an embedded firewall makes it harder for hackers to attack, so all your secrets stay secret.

•SWITCHES•
Power over Ethernet ports increase your network efficiency, dual SFP uplinks that strengthen the signal over longer distances, and a built-in app also lets your integrator troubleshoot any issues quickly and remotely.

•WAPS•
Say hello to this sleek beauty. It fits into any home or office with ease, while its handy Power over Ethernet capability cuts out unsightly wires and gives you extended, strong signals in a flash.
